

Florian F.L. Bentivegna received the Ingénieur degree in Optics from École Nationale Supérieure de Physique de Marseille, France, in 1990, the Diplôme d'Études Approfondies in Optics from Université d'Aix-Marseille III in 1990, and the Ph.D. degree from the Institut d'Optique Théorique et Appliquée, Orsay, in 1995. His Ph.D. dissertation was devoted to nonlinear optics in doped gel matrices. From 1996 to 2002, he was a researcher at Nijmegen University (The Netherlands), where he worked, among other subjects, on optical investigations of spin dynamics.

He is currently Maître de Conférences at the École Nationale d'Ingénieurs de Brest, France, where he has obtained the habilitation to conduct researches (HDR) in 2008, and is a member of the CNRS Lab-STICC laboratory. He is interested in particular in the modeling of photonic structures.
